

Input Services Supply Chain

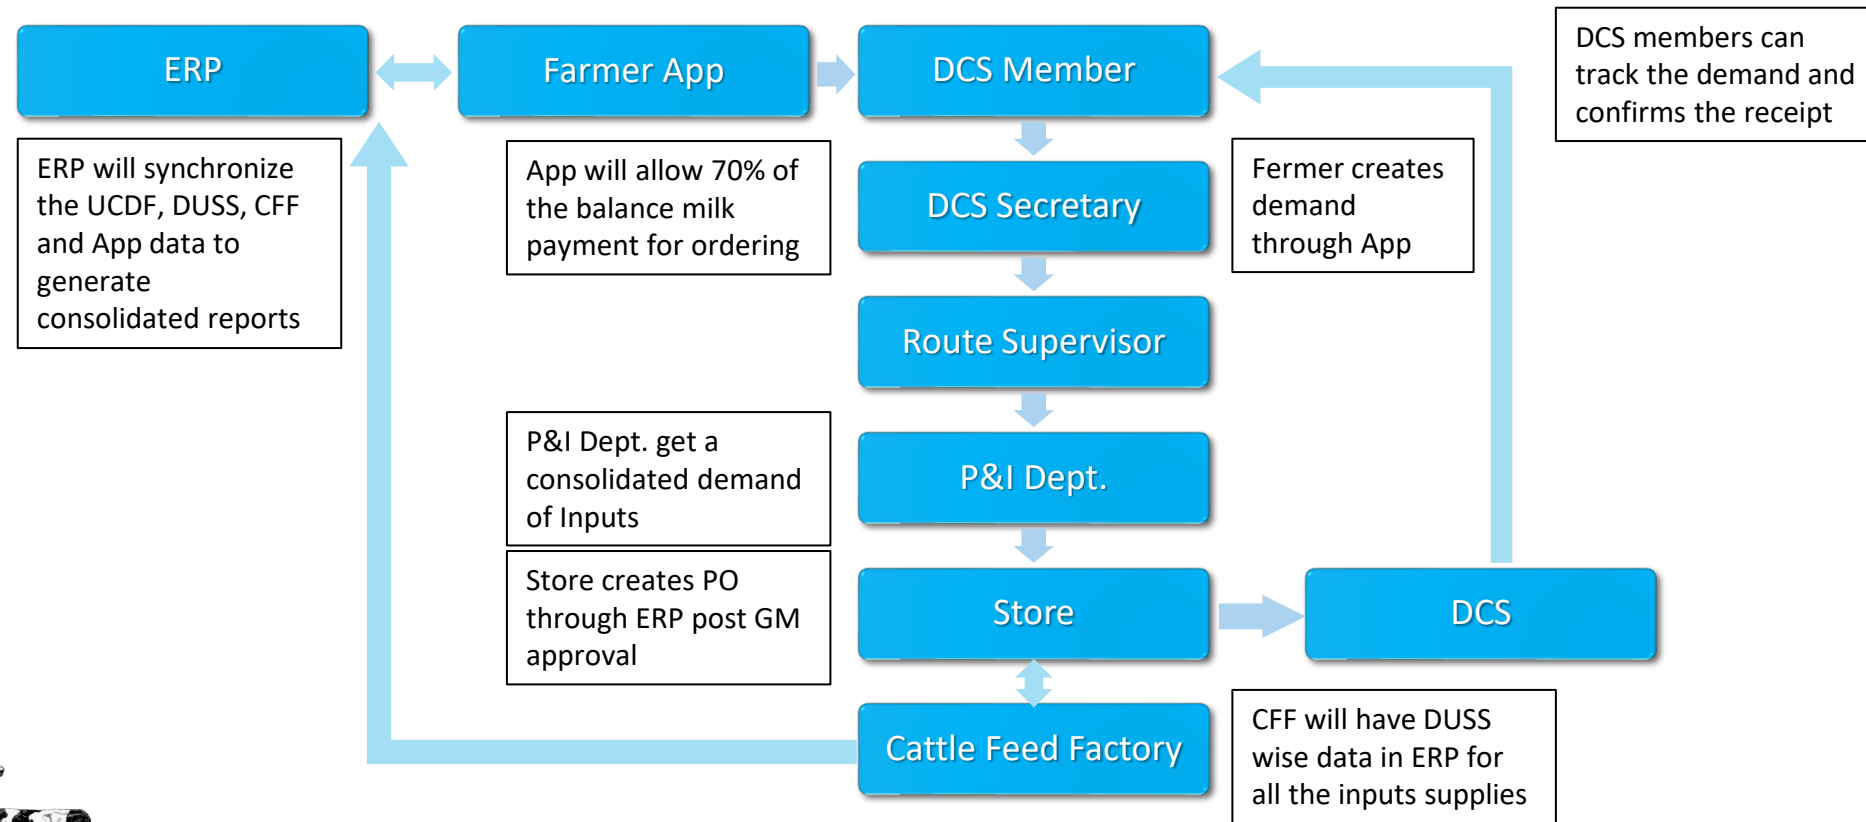

AANCHAL DAIRY

Current Input Services Supply System

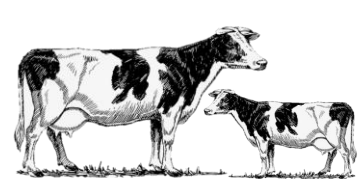

Proposed App Based Input Services Supply System

Proposed App Based Input Services Supply System

- The DCS member will be registered to Farmer App.
- The DCS members can create their input services demand through Farmer App itself. The DCS members can generate their demand in the 1st and 3rd week of every month.
- The Farmer App will fetch data from ERP about DCS member's milk supplied and total outstanding amount of the member.
- The App will allow the DCS member to order up to 70% of the outstanding amount.
- This order will go to DCS secretary for approval and Secretary will approve and forward the demand to route supervisor.

Proposed App Based Input Services Supply System

- The route supervisor will get a consolidated demand of the DCS. Once the supervisor approves the demand, it will go to DUSS for further processing.
- The DUSS will get a consolidated demand of all the DCS and dispatch the materials to the concerned DCS through ERP for distribution to DCS members.
- As ERP and App are linked with each other through an alert will be sent to DCS and members once the material is dispatched from DUSS.
- The DCS member will confirm the receipt through App.
- The demand of input services by members and DCS can be tracked by DUSS, cattle feed factory and other concerned officials.
- Provisions for the user-based accessibility will be provided in App.
